

Pertemuan 3

Identifikasi Proses

- *Mahasiswa mempelajari cara mengidentifikasi proses bisnis dalam suatu organisasi.*
- *Mahasiswa memahami konteks identifikasi proses, definisi arsitektur proses, dan pemilihan proses yang relevan.*
- *Melalui latihan praktik, mahasiswa mencoba membuat peta awal proses bisnis sederhana berdasarkan skenario tertentu.*

Ahmadi Yuli Ananta

Program Studi
Sistem Informasi Bisnis

Identifikasi proses

Apa ?

1. Mengidentifikasi proses bisnis dalam suatu organisasi
2. Memprioritaskan pengelolaannya berdasarkan kriteria tertentu

Mengapa ?

1. Memahami organisasi secara lebih mendalam
2. Memaksimalkan *value* (nilai) dari proyek Manajemen Proses Bisnis (BPM)

Identifikasi Proses

1. Langkah awal

- Kumpulkan proses utama
- Menentukan ruang lingkup proses

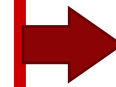

Arsitektur
Proses

2. Langkah prioritas (Pemilihan proses)

Prioritaskan proses berbasis:

- Tingkat Kepentingan Proses
- Kesehatan Proses
- Kelayakan proses

Portofolio
prioritas
proses

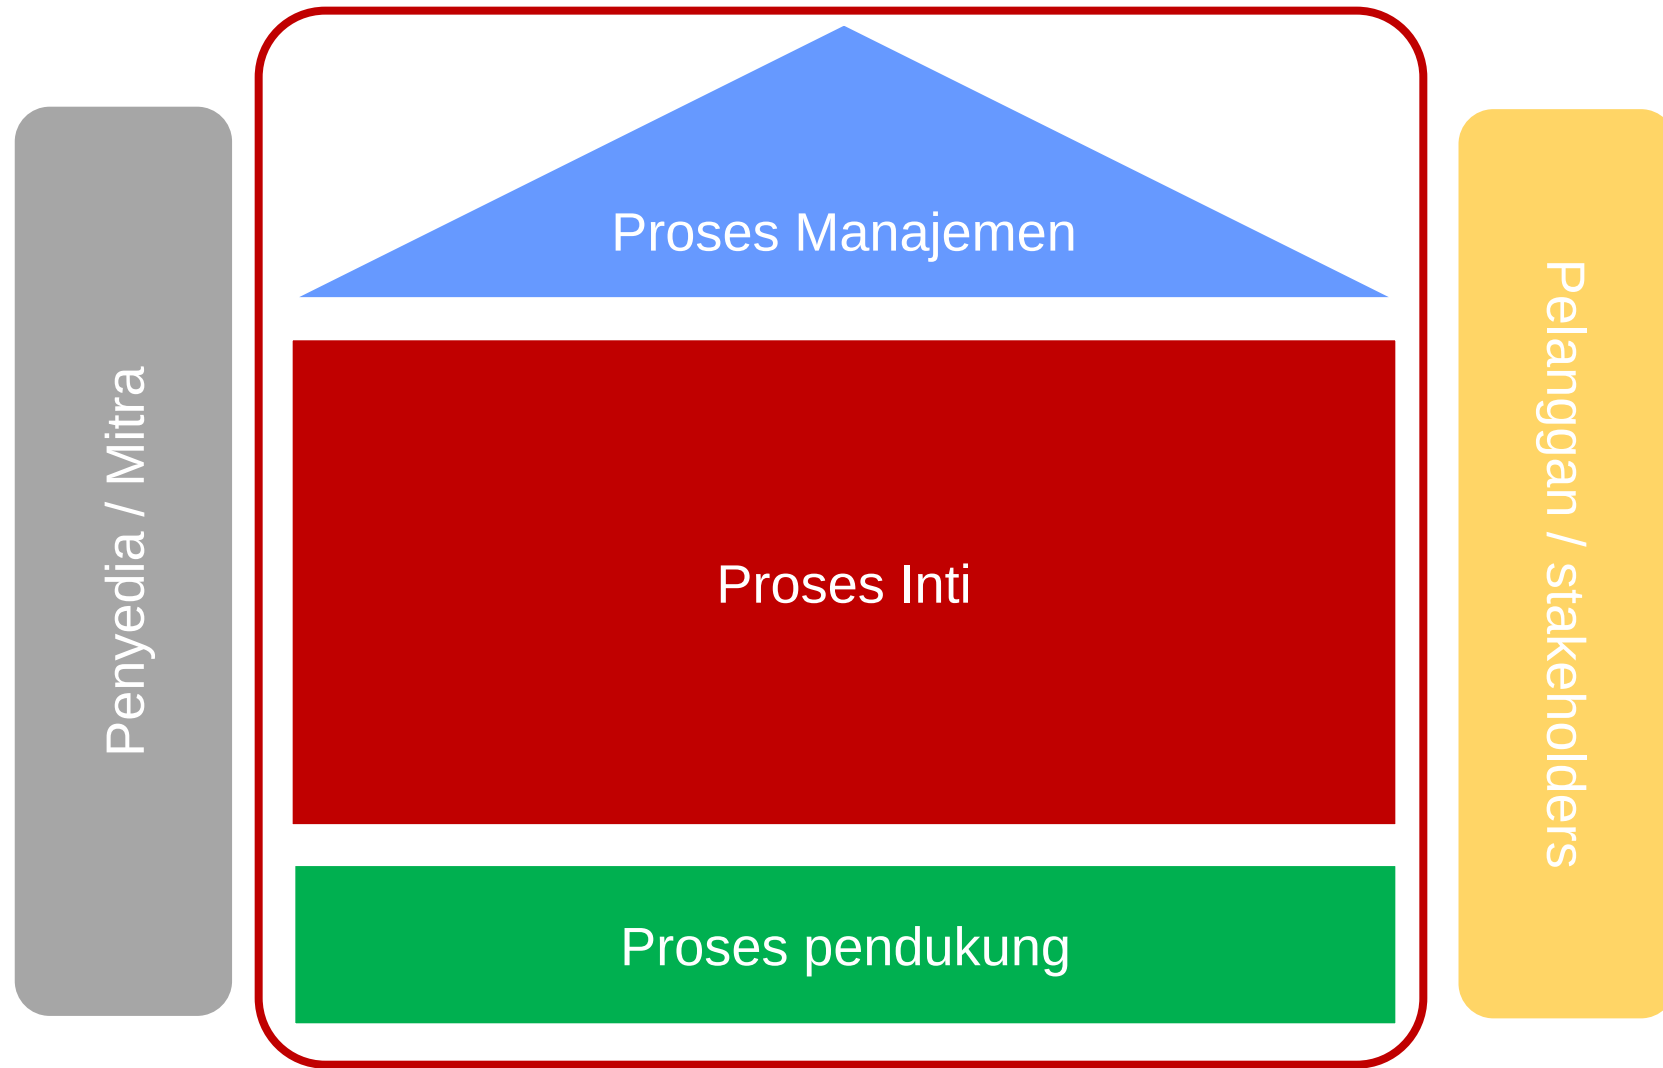

Process Enumeration

"Kebanyakan bisnis hanya memiliki tiga proses inti:M

1. Menjual barang
2. Mengirimkan barang
3. Memastikan memiliki barang untuk dijual dan dikirim"

Geary Rummler

Porter: Tipe proses

Contoh : Proses Manajemen, Inti dan Pendukung

Perusahaan Grosir

Proses Inti

- Penjualan (lead-to-quote, quote-to-order, order-to-cash)
- Pengadaan-ke-Pembayaran (pengadaan langsung, misalnya pemesanan persediaan)...

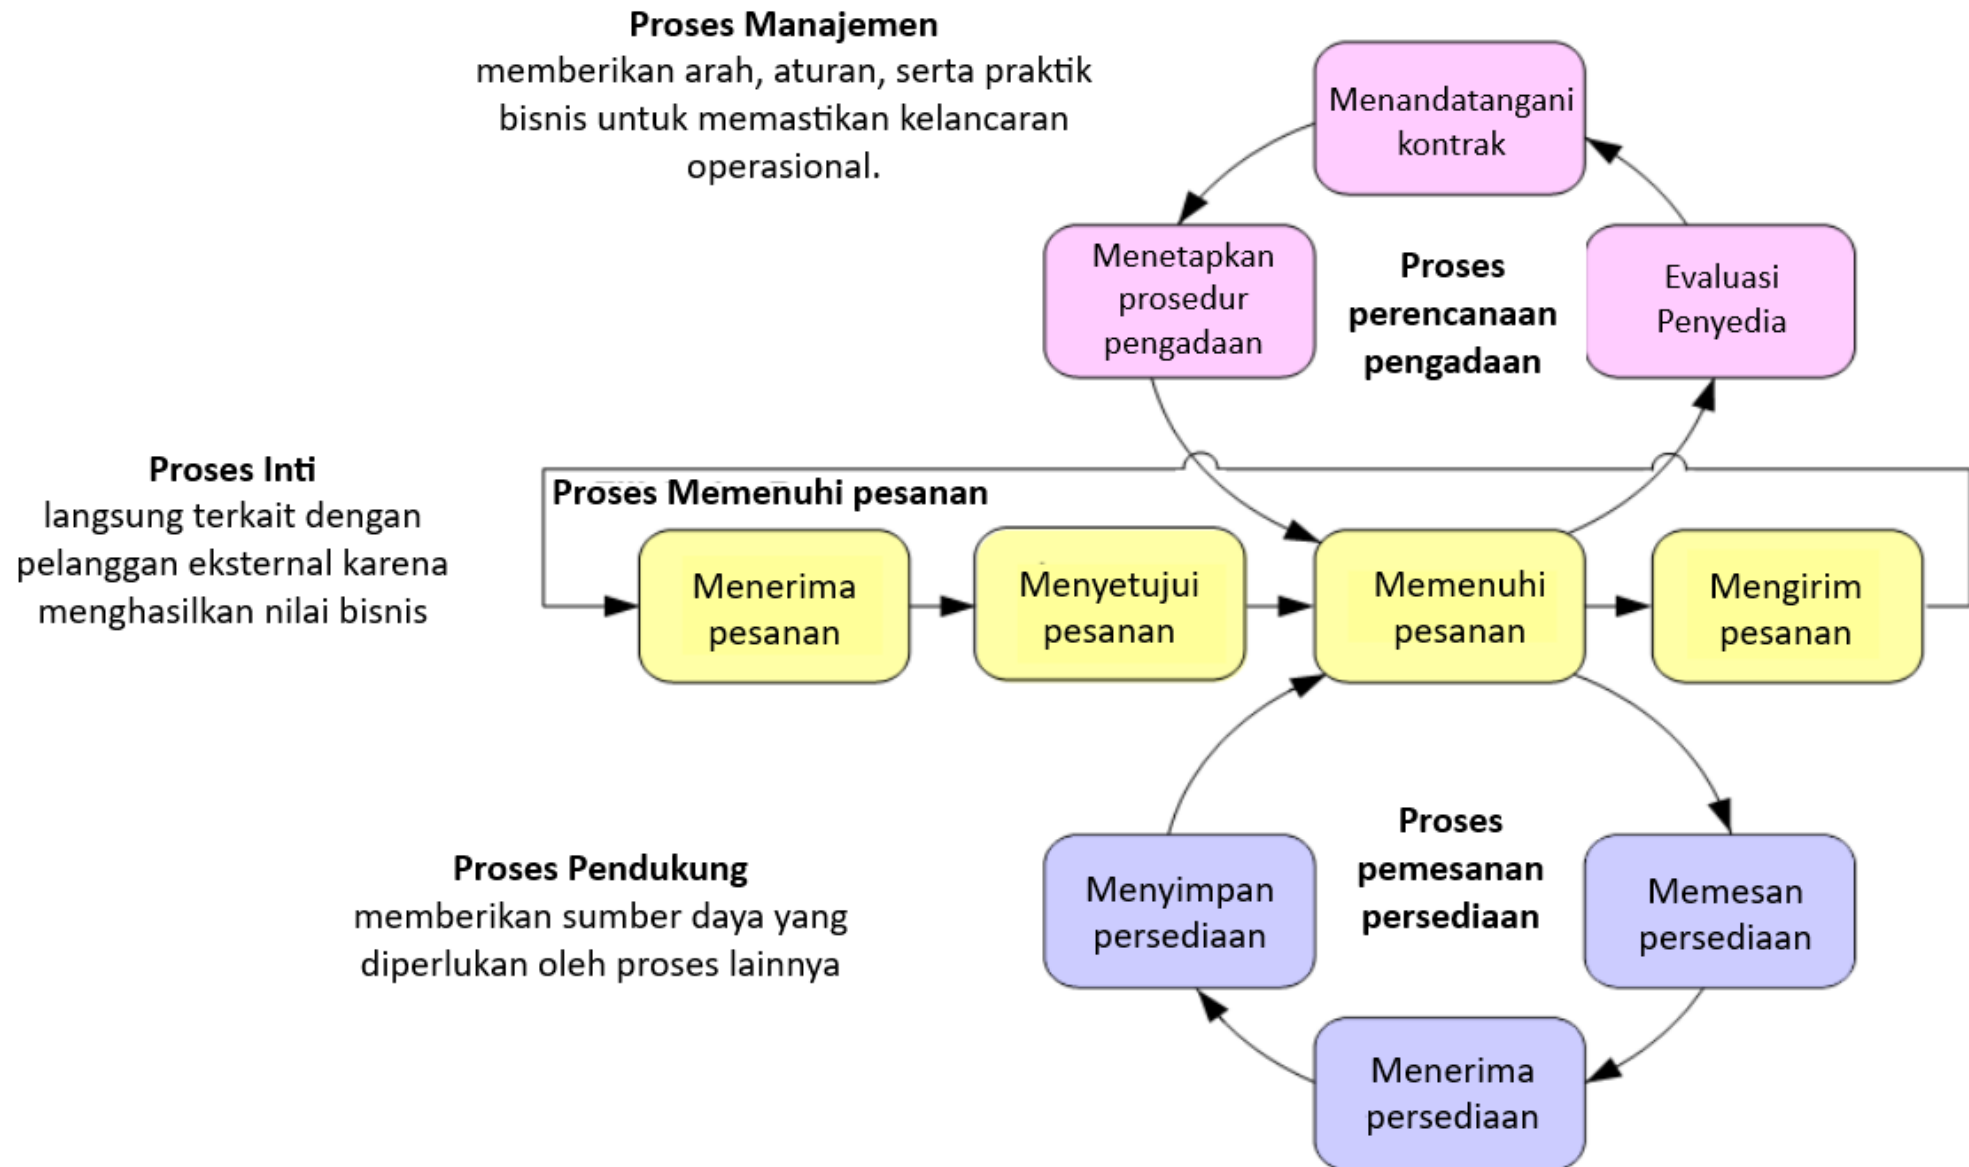

Proses Pendukung

- Pembelian-ke-pembayaran (pengadaan tidak langsung, misalnya pengisian ulang suku cadang, pengisian ulang sumber daya operasional...)
- SDM (pembaruan kebijakan, perekrutan, OJT, masa percobaan...)...

Proses Manajemen

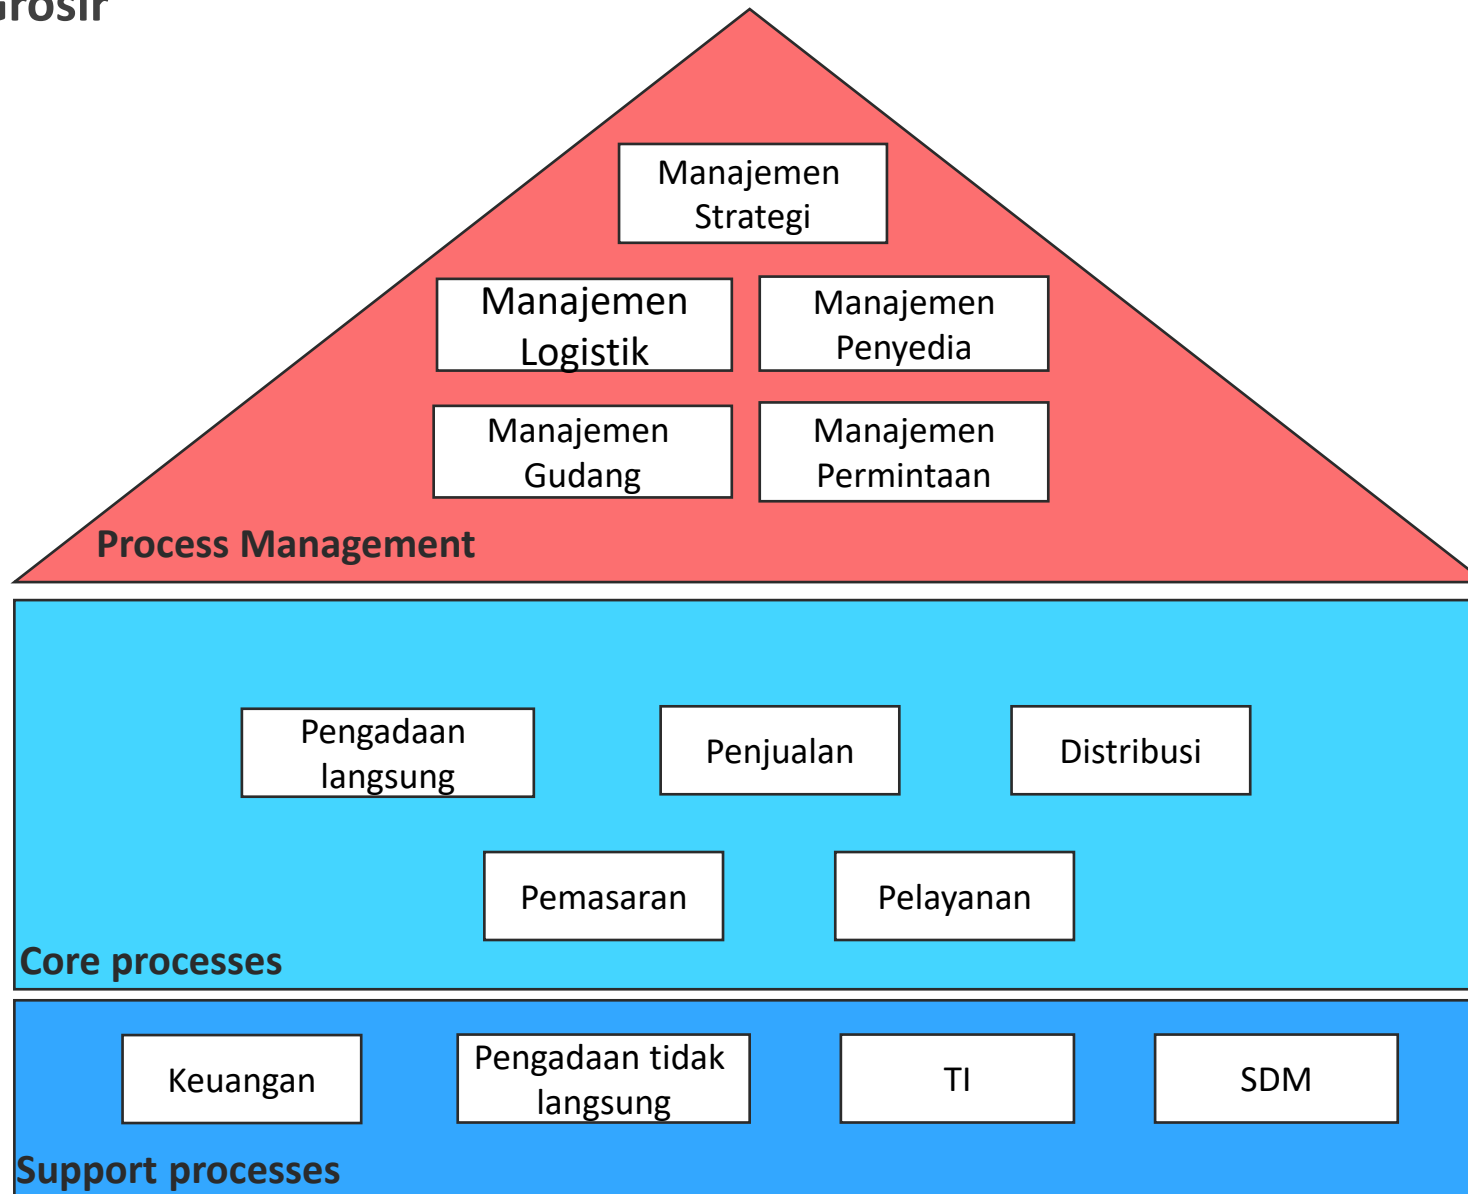

- Manajemen pengadaan (perencanaan pengadaan, evaluasi penyedia...)
- Manajemen logistik (perencanaan logistik, pengendalian logistik...)...

Hubungan antara Proses Manajemen, Inti dan Pendukung

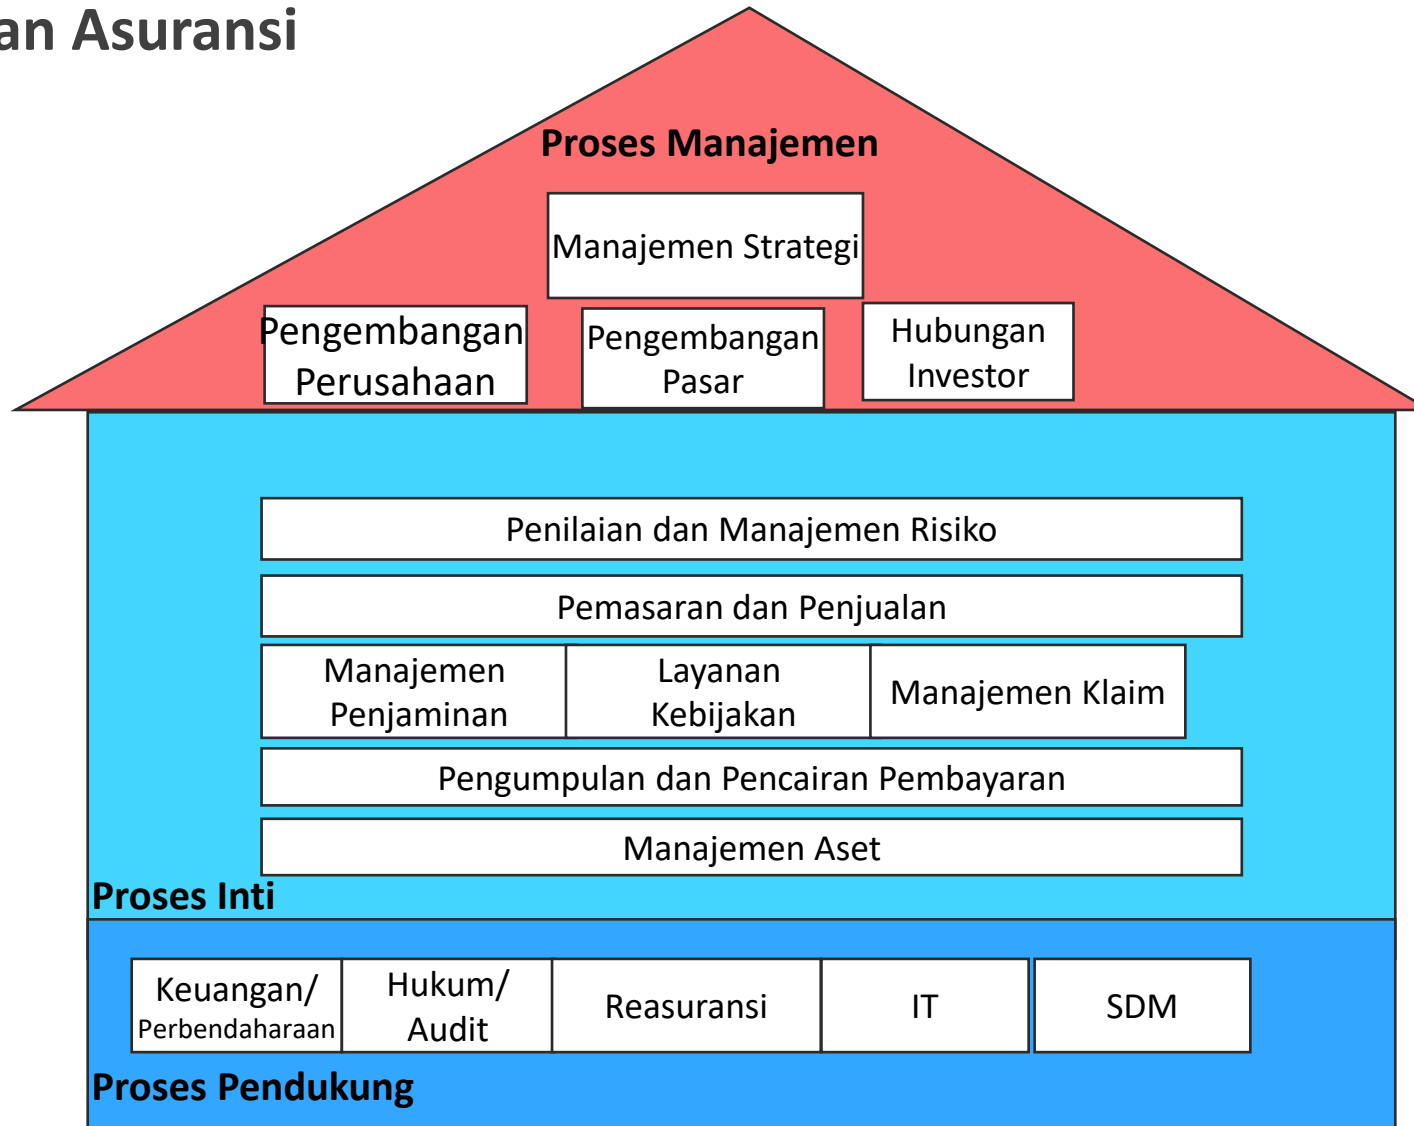

Contoh: Arsitektur proses

Grosir

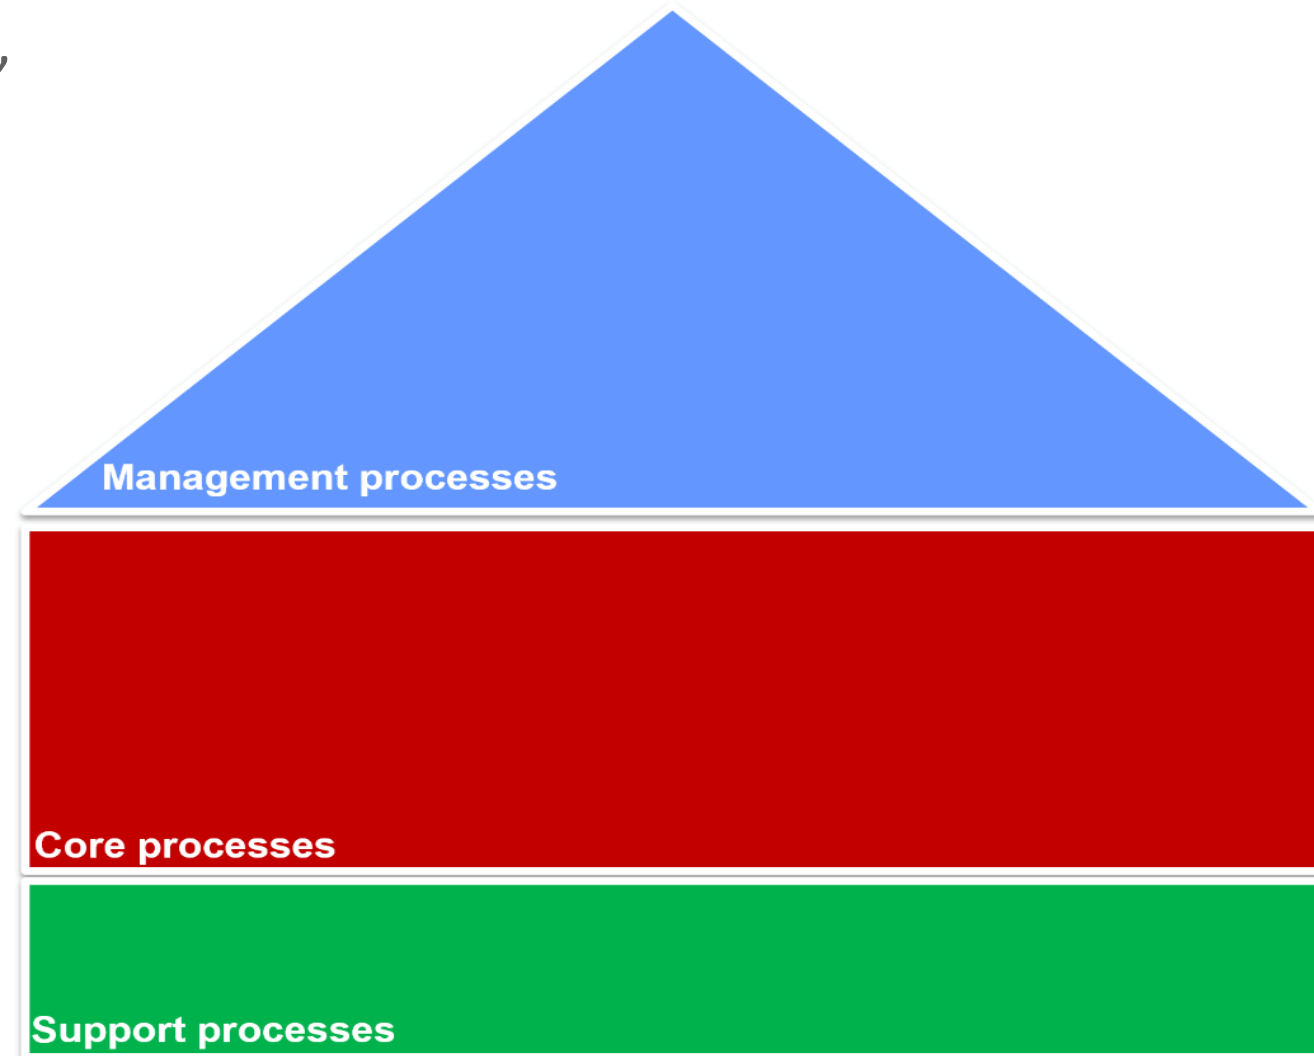

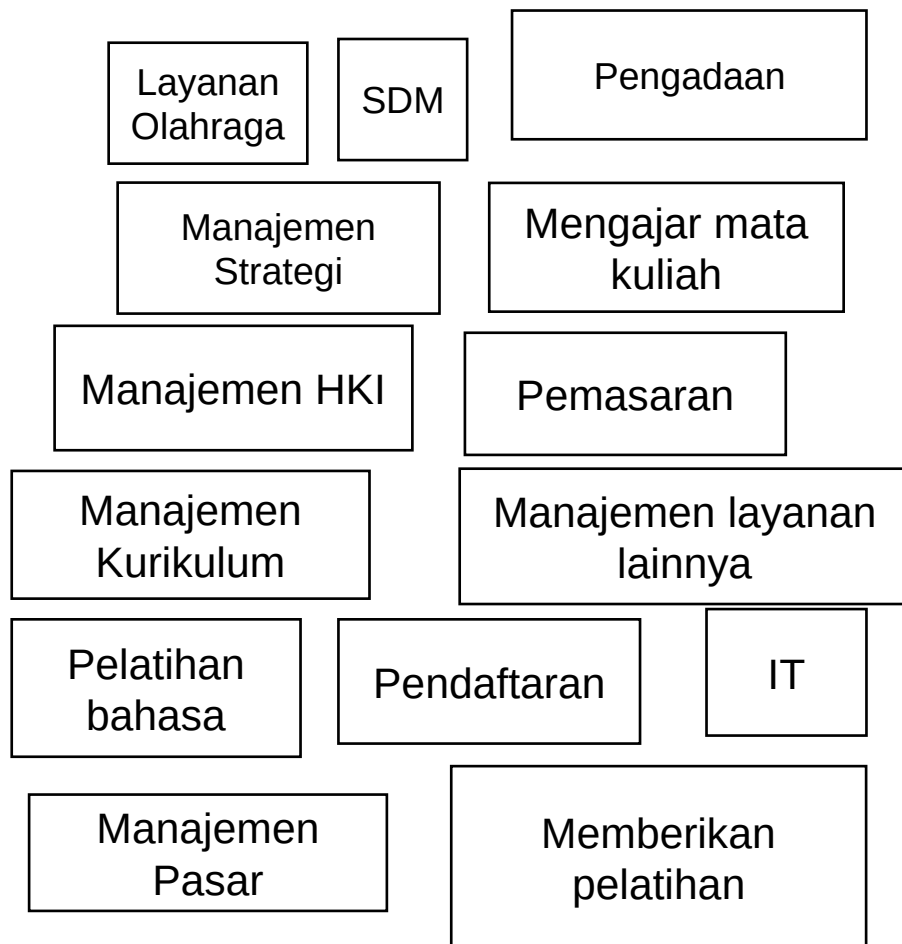

Contoh: Arsitektur proses

Perusahaan Asuransi

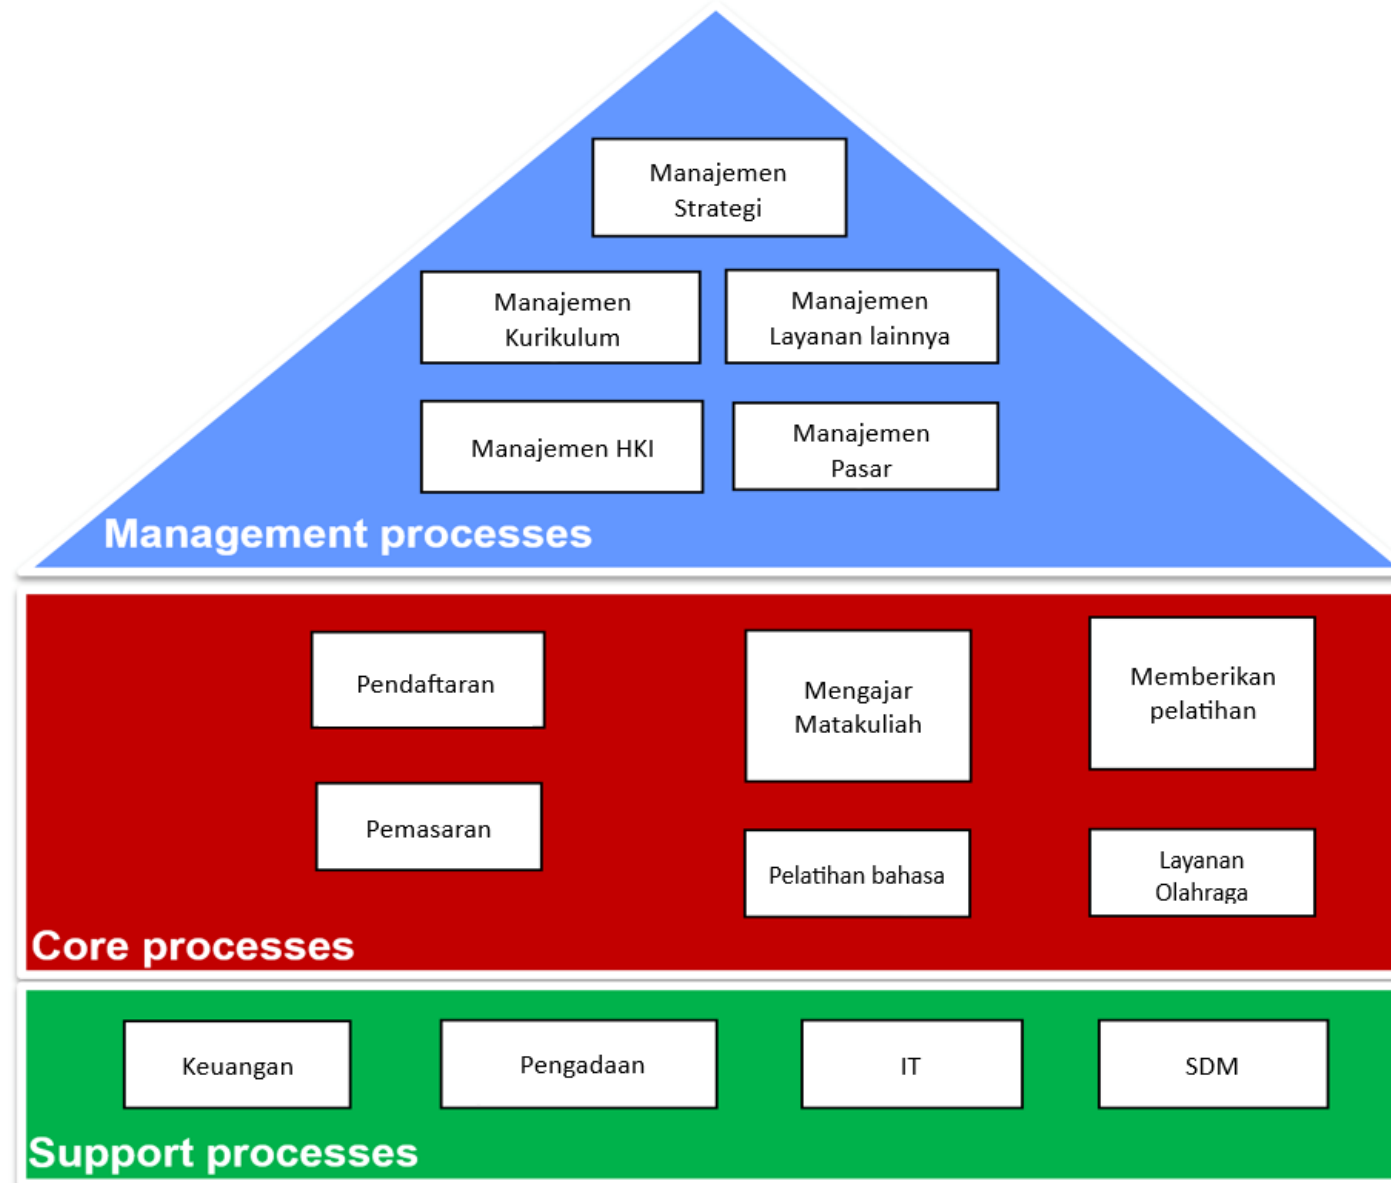

Latihan: mengklasifikasikan berdasarkan jenis proses

Kelompok proses ini biasanya dilakukan di Perguruan tinggi. Kategorikan setiap kelompok proses sebagai inti, pendukung,

Solusi: identifikasi jenis proses

Penentuan ruang lingkup proses

Proses memiliki ketergantungan → membutuhkan *feedback* yang terkait proses lain

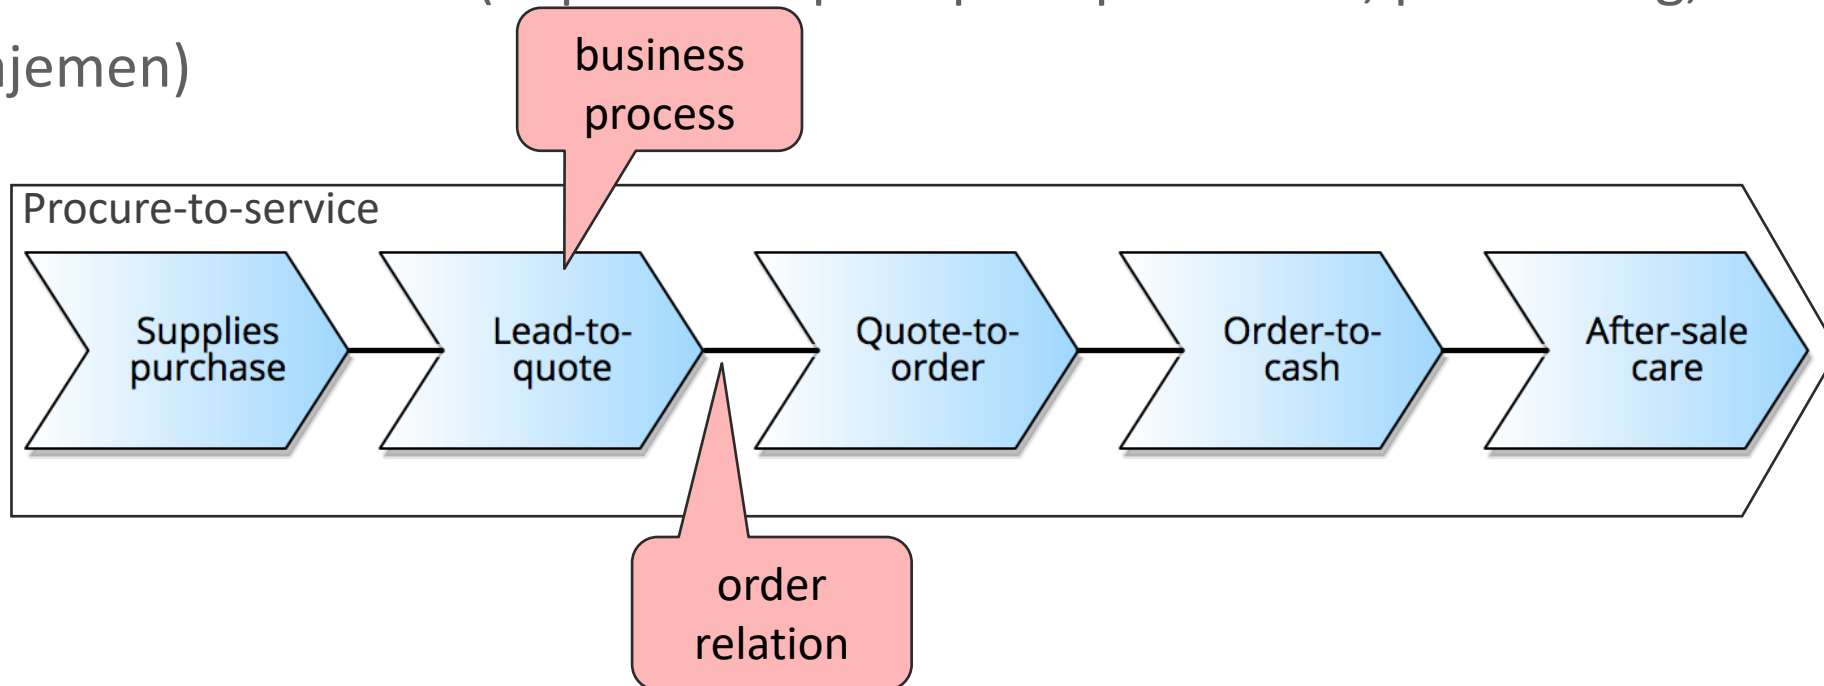

- Spesialisasi: bersifat umum – spesial produk/layanan
- Horisontal: proses dari hulu ke hilir dalam rantai nilai suatu bisnis
- Vertikal: proses utama – sub-proses

Arsitektur proses

Value chain modeling / Pemodelan Rantai Nilai

- Serangkaian proses yang dilakukan oleh suatu organisasi untuk memberikan nilai kepada pelanggan dan pemangku kepentingan
- Secara lebih umum, mekanisme untuk mengelompokkan proses bisnis tingkat tinggi menurut *order relation* (dapat diterapkan pada proses inti, pendukung, dan manajemen)

Pedoman untuk mengidentifikasi batasan horizontal dalam rantai nilai (value chains)

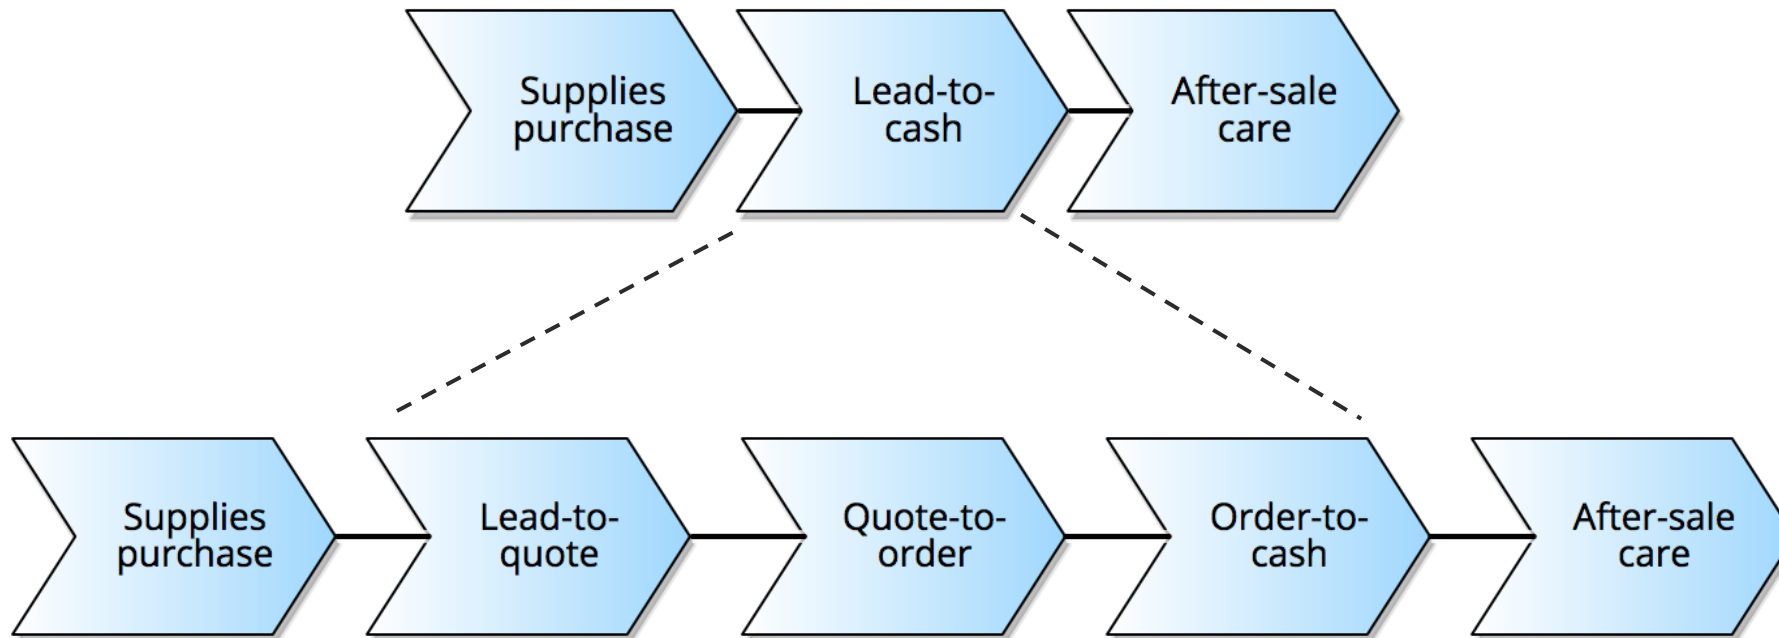

1. Perubahan objek bisnis utama dalam proses
2. Perubahan tingkat detail dari objek bisnis utama
3. Perubahan dalam frekuensi atau waktu
4. Perubahan hasil, solusi, atau tujuan

Example: value chain

Wholesaler

Core processes

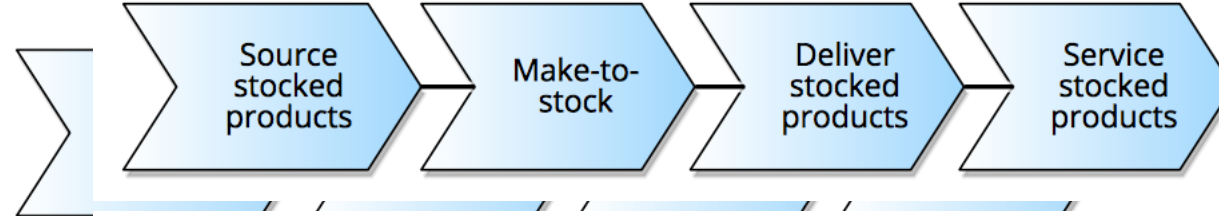

Typical value chains for core processes

Think around three main steps:

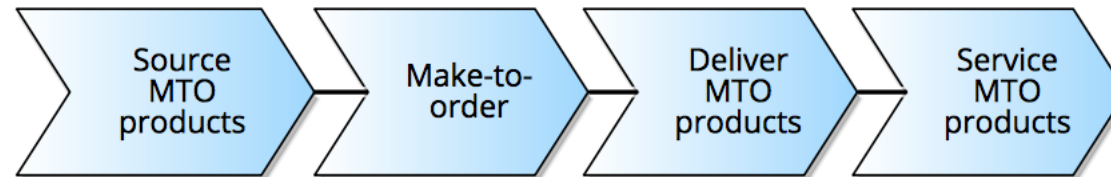

- Imagine it (design new product/service)
- Build it (source, assemble, deliver product/service)
- Sell it (market, sell, service product/service)

Example: Producer

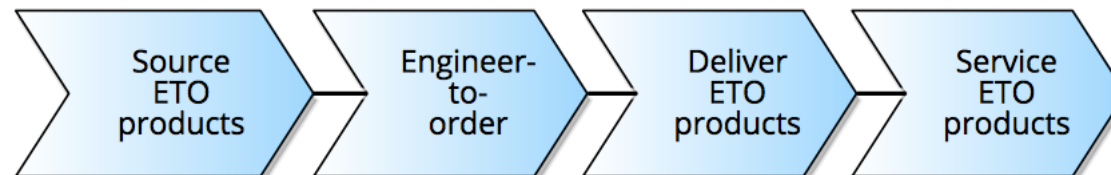

Stocked
products:

MTO
products:

ETO
products:

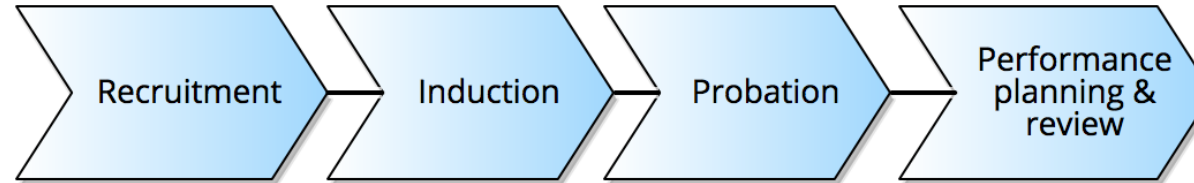

Specializations

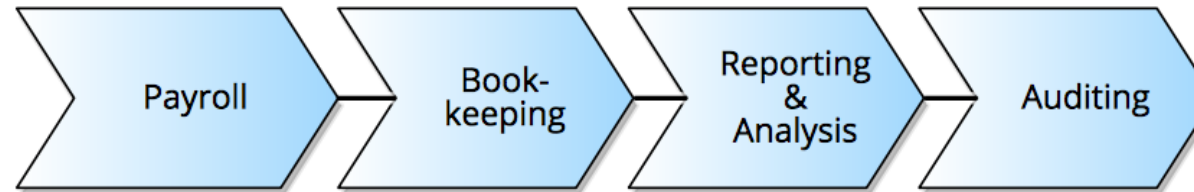

Example: value chain of non-core processes

Support processes

HR:

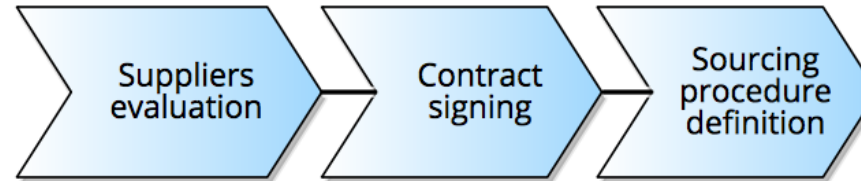

Accounting:

Management processes

Suppliers
management:

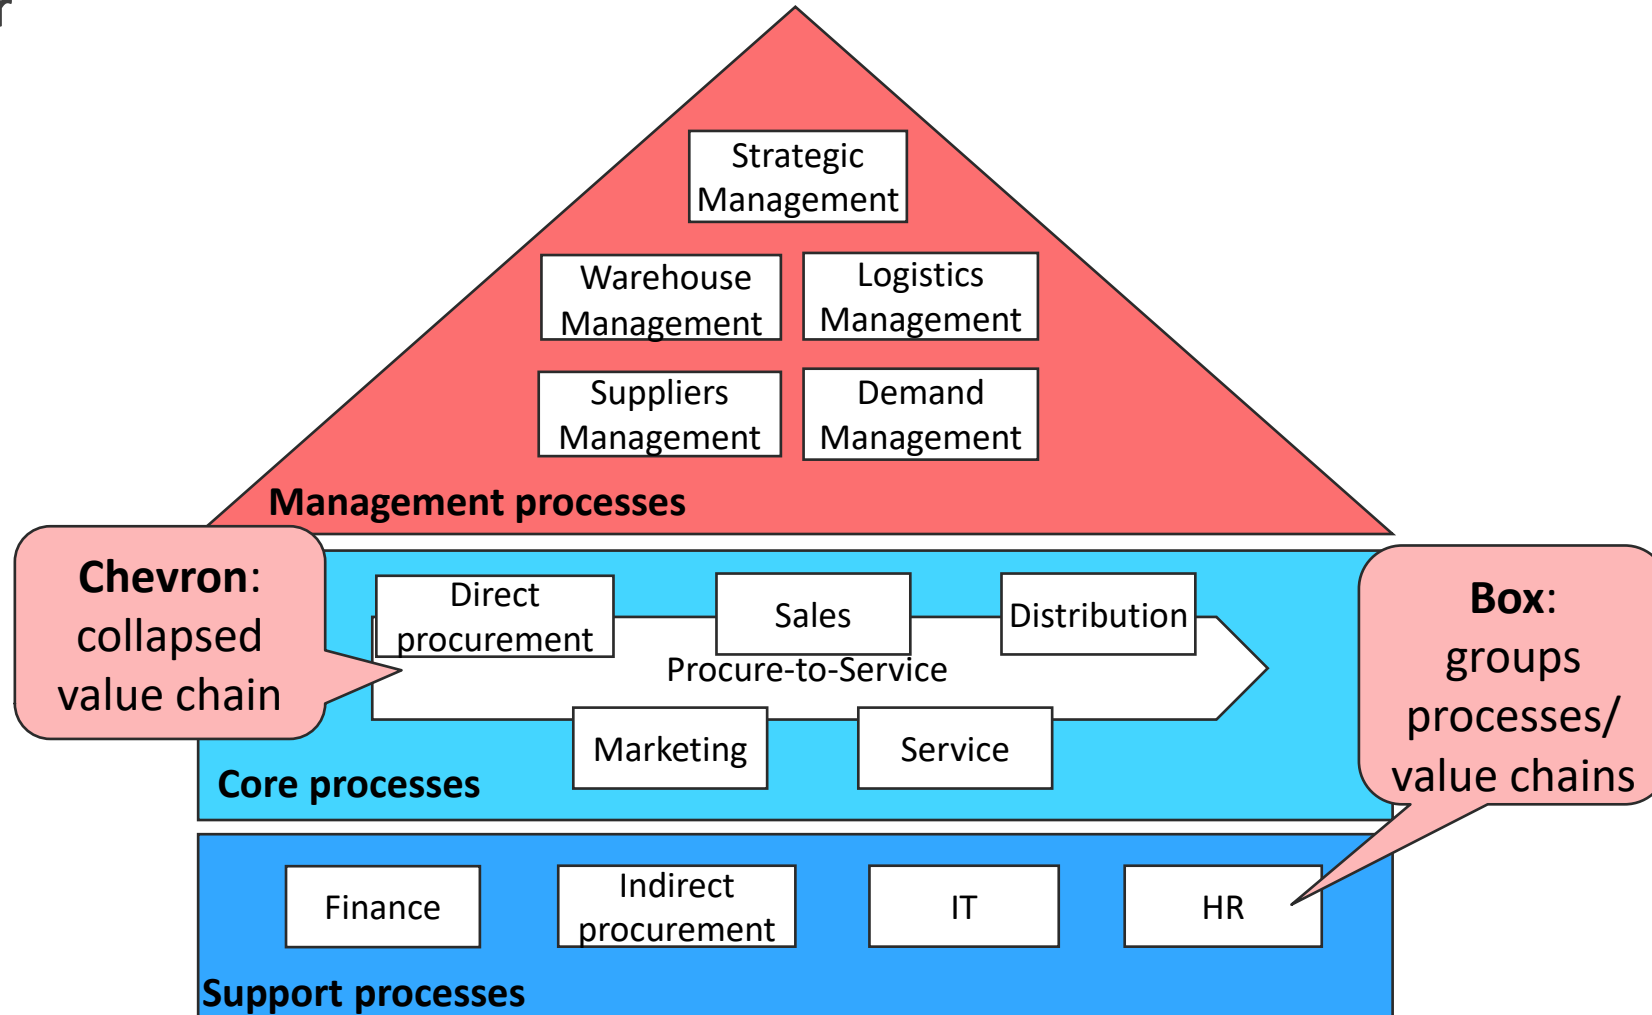

Risk
management:

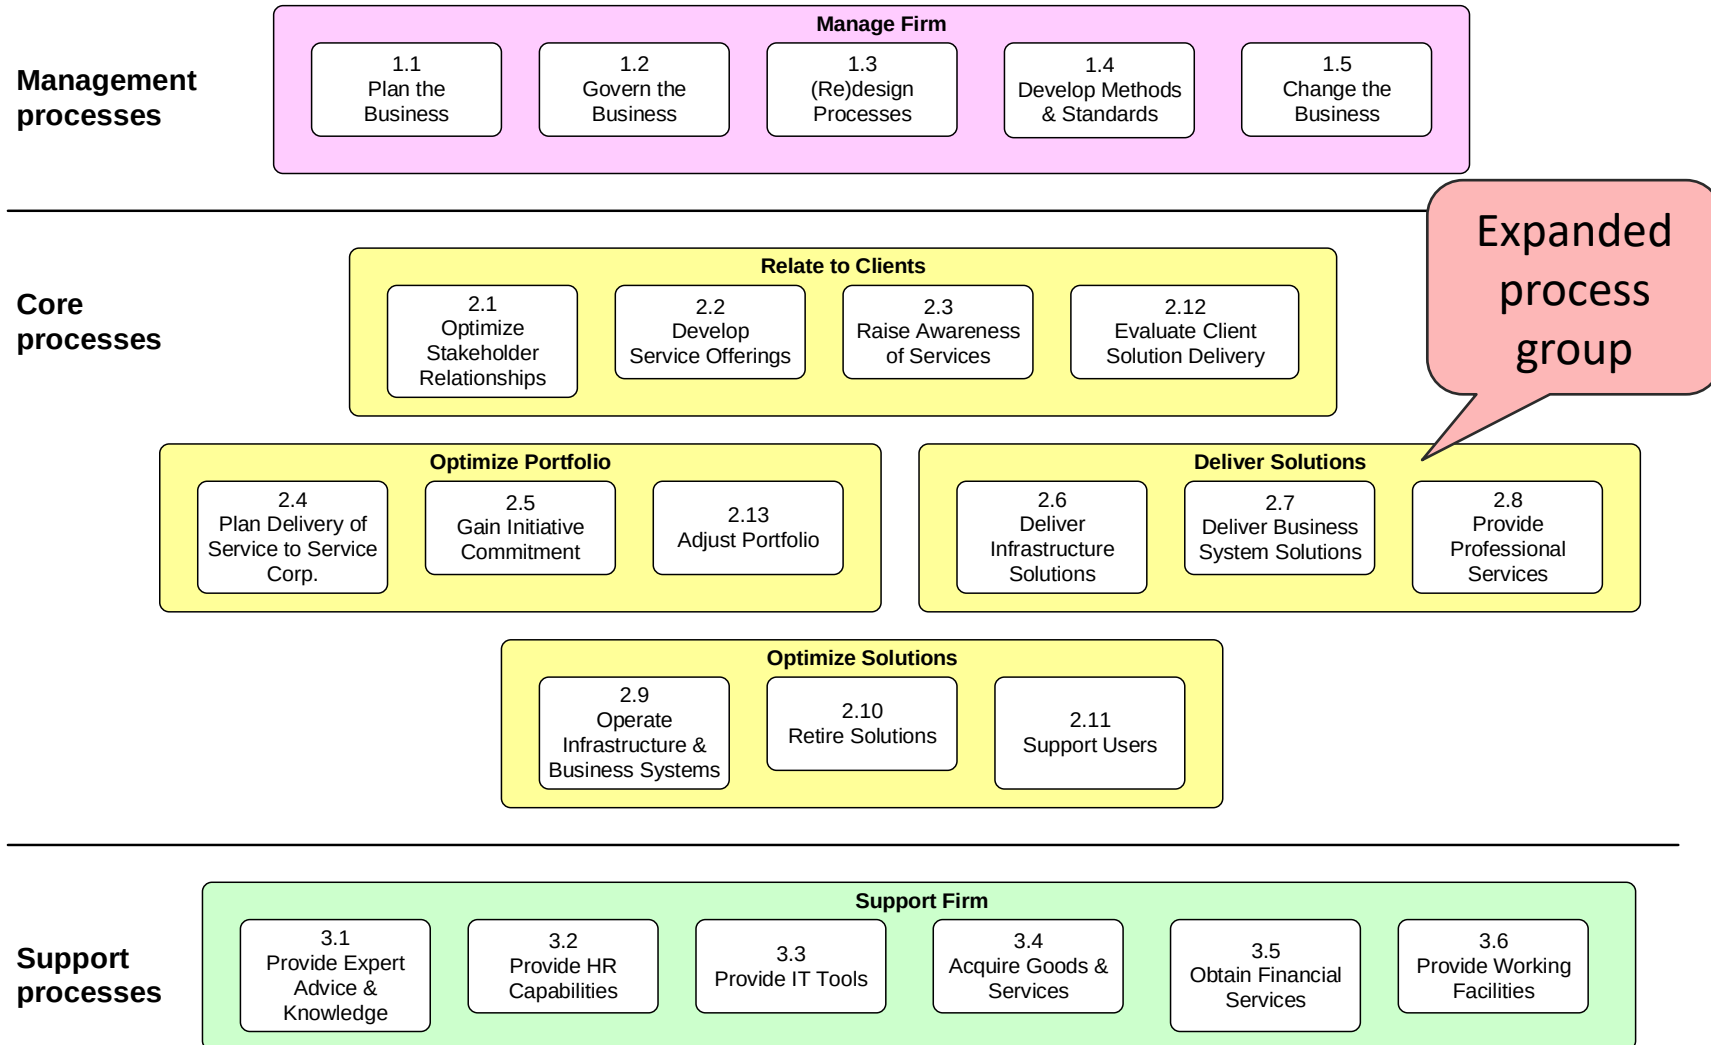

Example: process architecture & value chains

Wholesaler

Alternative: process architecture – groups

Consultancy Firm

Typical artifacts for vertical scoping

Typical focus of Process enumeration

Value chains

Chains of processes. Stay at a high level. Rule of thumb: 3-7 processes

- *Procure-to-service, Risk management*

(Root/Main) Processes

Build up value chains and affect each other. They are abstract

- *Lead-to-quote, Quote-to-order, Order-to-cash*

Subprocesses

These are detailed, involve multiple activities and can be layered on different levels.

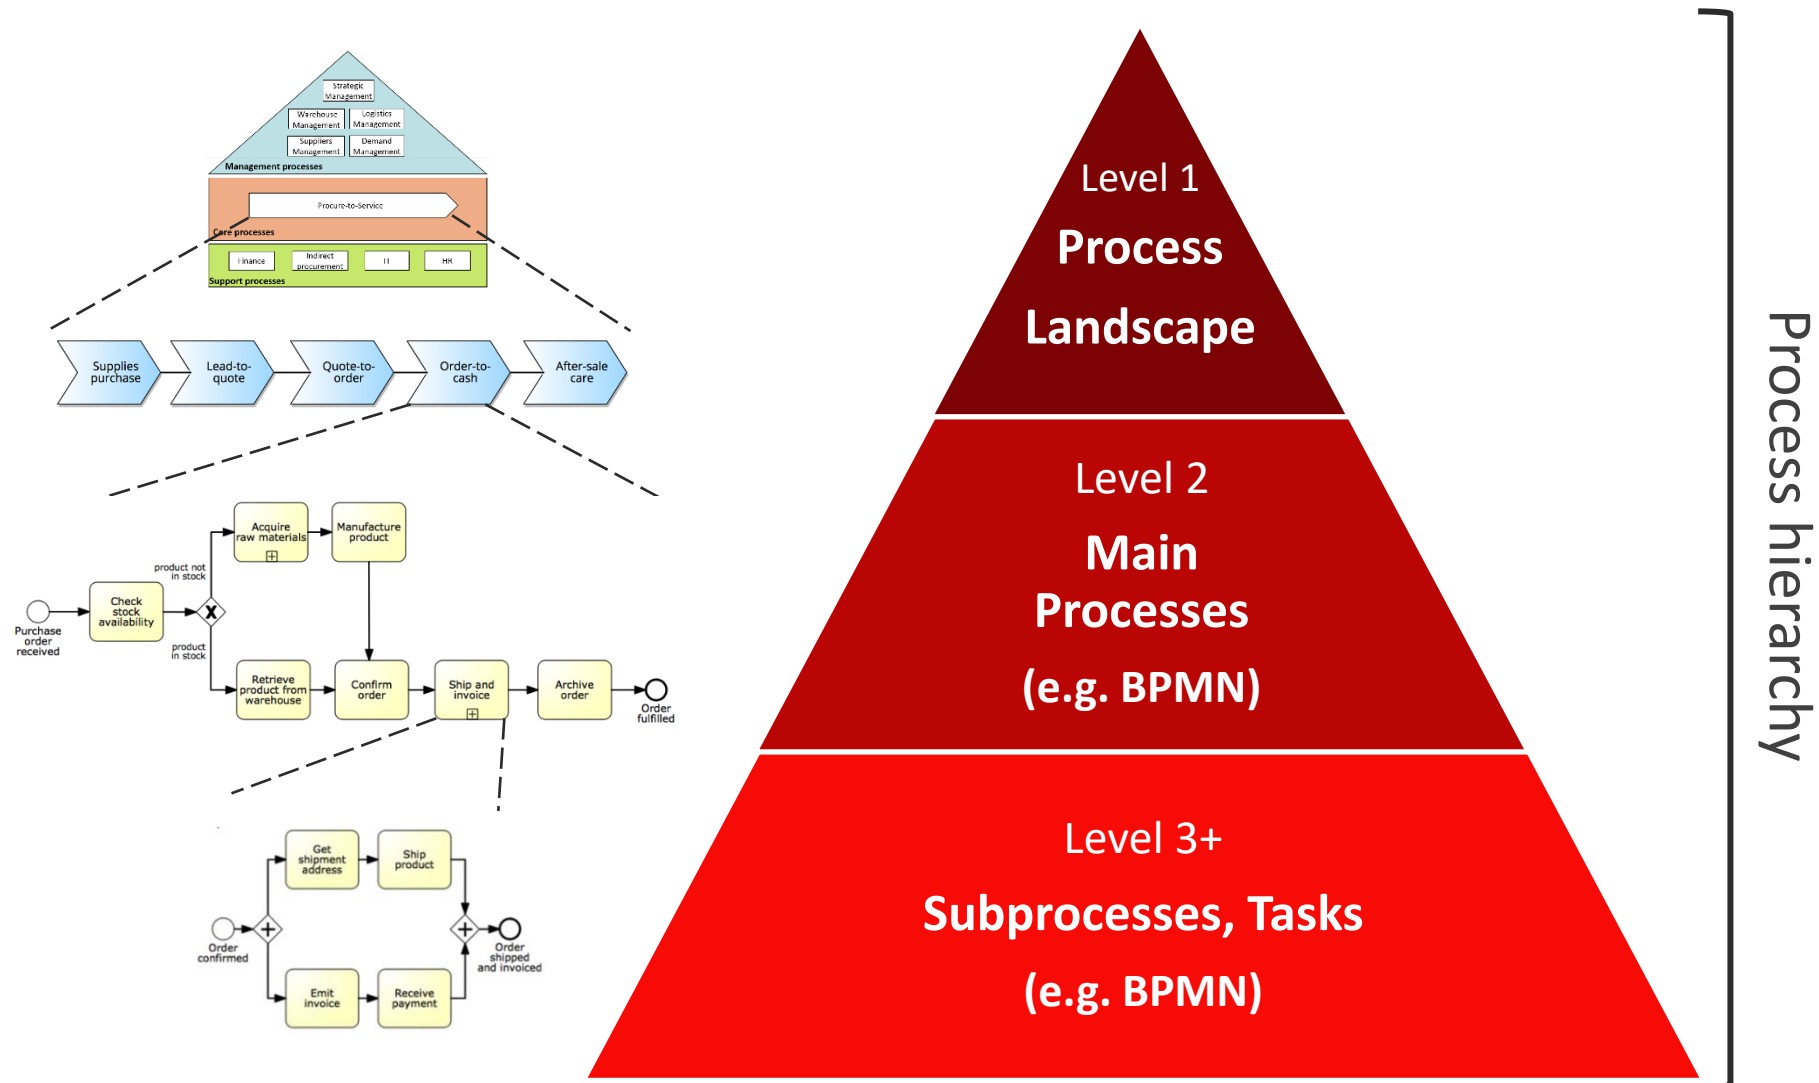

- *Order shipment, invoicing*

Tasks

These are atomic and performed by human resources, IT systems or equipment

- *E.g. Approve invoice*

Process architecture: hierarchical view

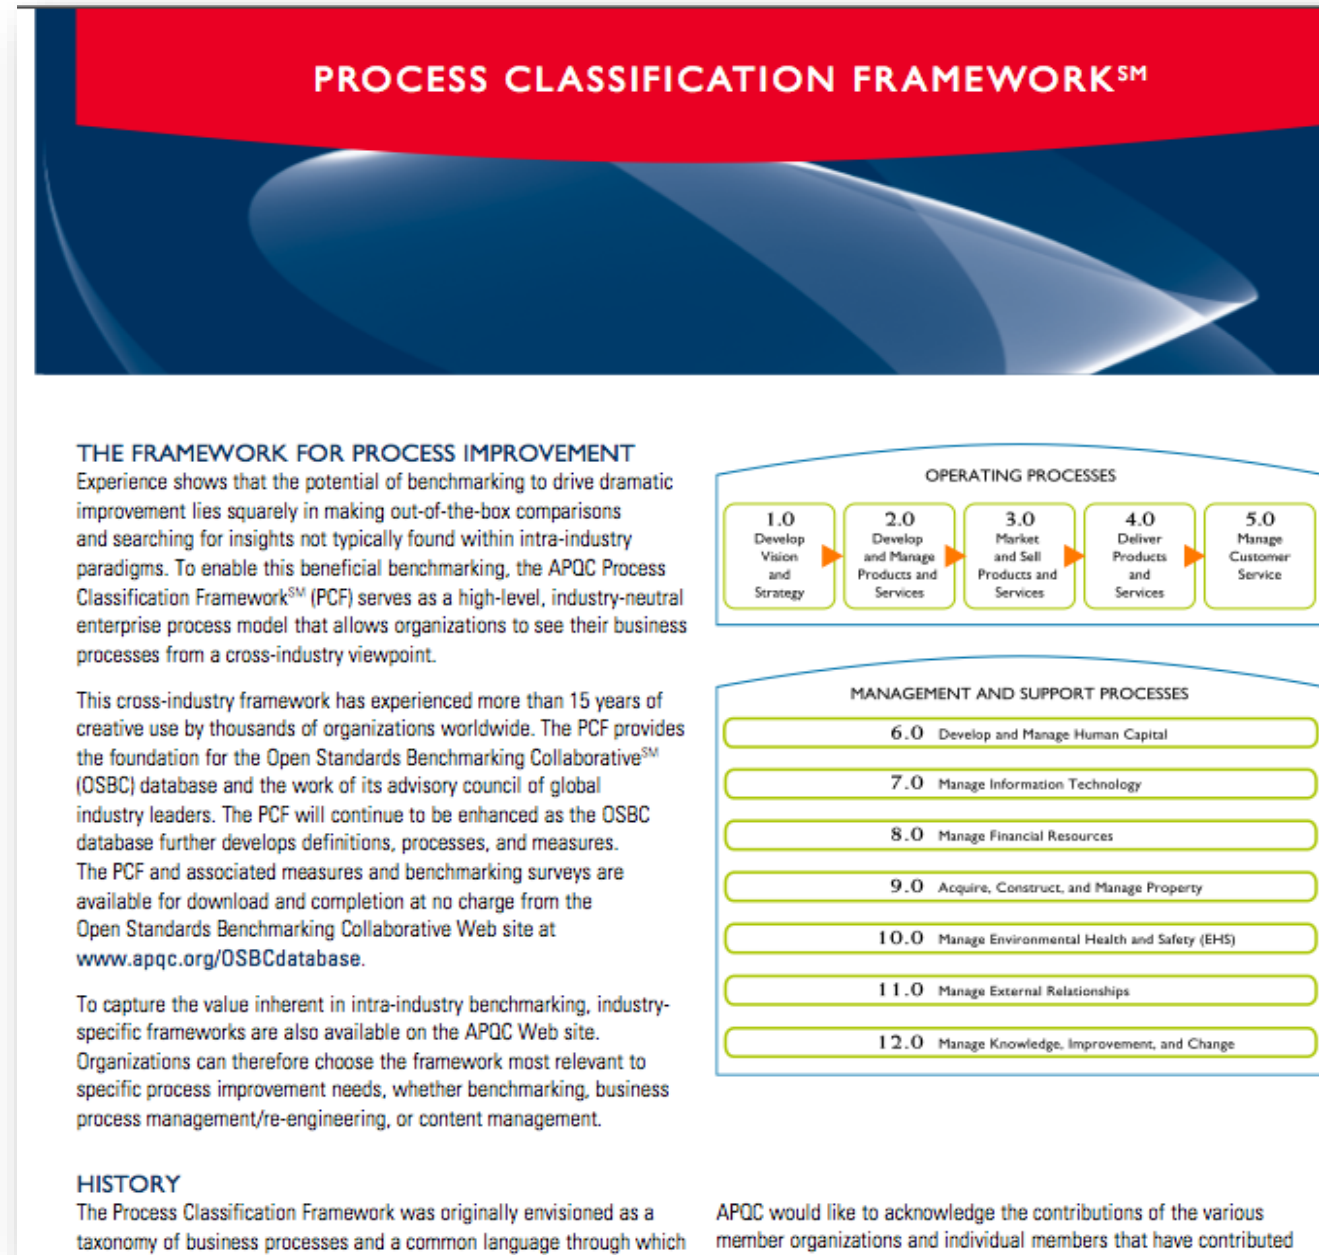

Designation via reference models

Sebuah model referensi digunakan sebagai template untuk merancang arsitektur proses.**Contoh:**

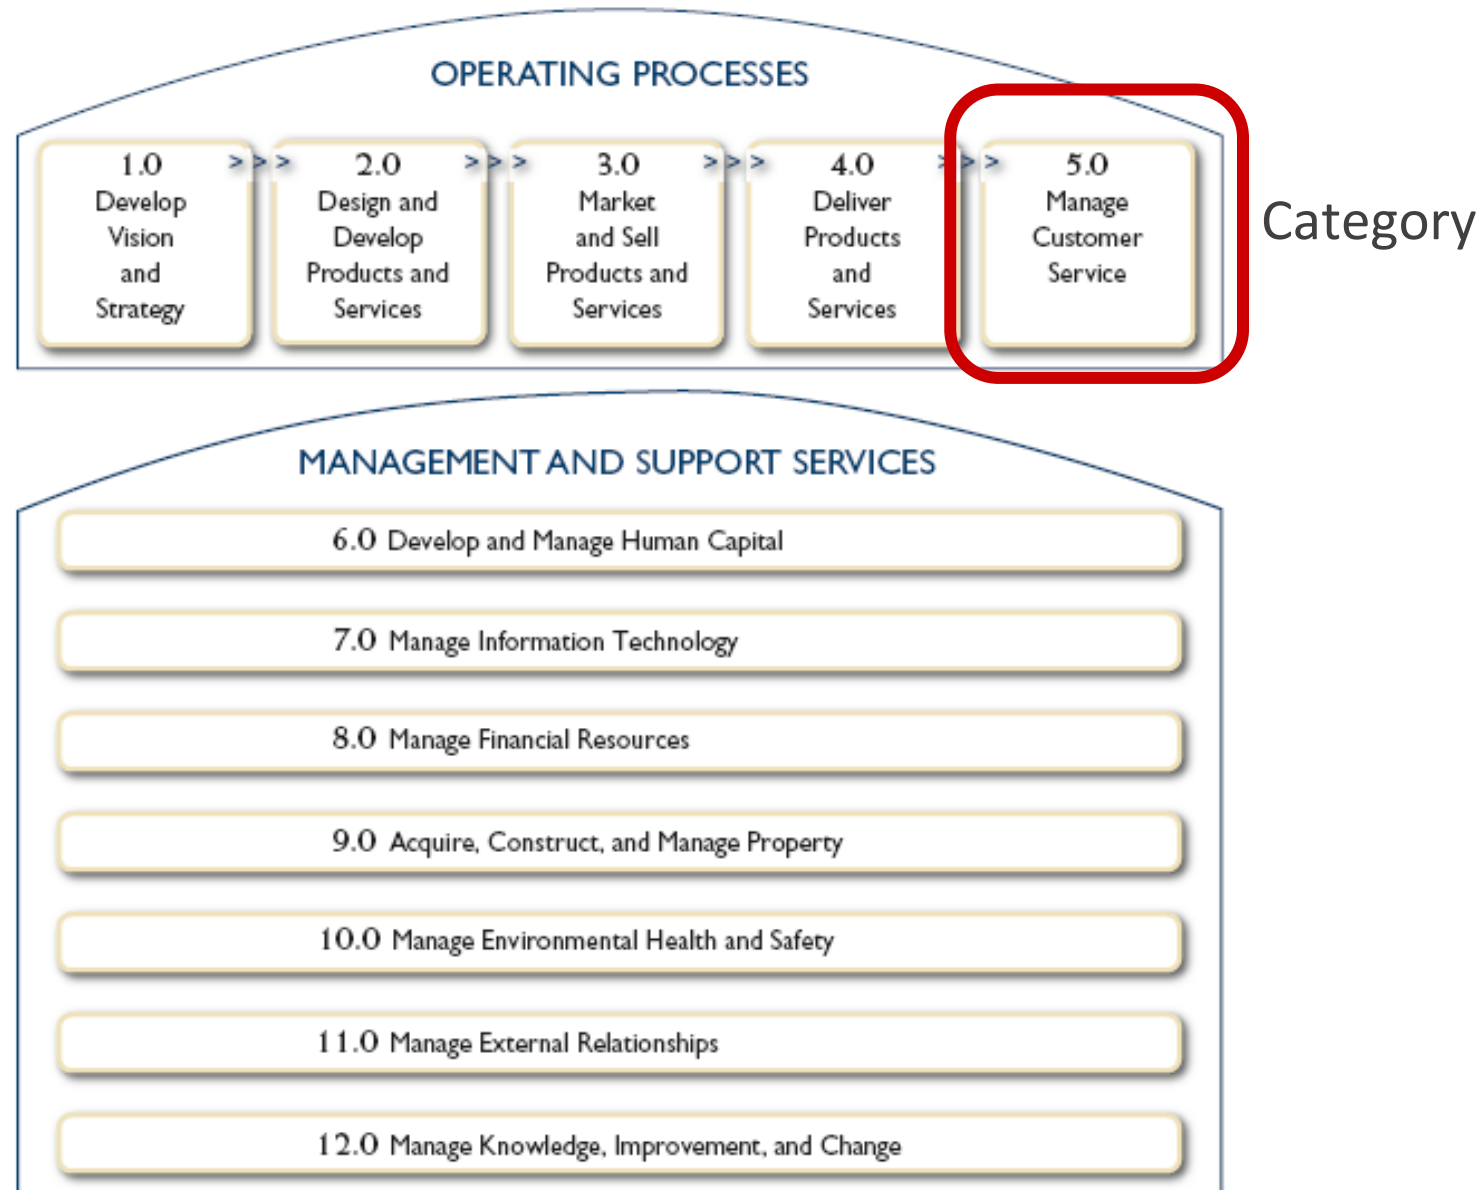

- **Information Technology Infrastructure Library (ITIL)** → Perpustakaan Infrastruktur Teknologi Informasi
- **Supply Chain Operations Reference Model (SCOR)** → Model Referensi Operasi Rantai Pasokan
- **Process Classification Framework (PCF)** → Kerangka Klasifikasi Proses
- **Control Objectives for Information Technology (COBIT)** → Tujuan Pengendalian untuk Teknologi Informasi
- **Value Reference Model (VRM)** → Model Referensi Nilai
- **Voluntary Interindustry Commerce Solutions (VICS)** → Solusi Perdagangan Antarindustri Sukarela
- **eTOM Business Process Framework** → Kerangka Proses Bisnis eTOM

Example: APQC Process Classification Framework (PCF)

- Industry-neutral enterprise model
- Open standard for benchmarking
- Four levels
 - Categories
 - Process group
 - Process
 - Activity

APQC PCF Overview

APQC Classification Framework

Activity	4.1.8.4	Identify performance trends (10273)	Group	4.3.1.4	Release production orders and create lots (10309)
	4.1.8.5	Analyze performance benchmark gaps (10274)		4.3.2	Produce product (10304)
	4.1.8.6	Prepare appropriate reports (10275)		4.3.2.1	Manage raw material inventory (10310)
	4.1.8.7	Develop performance improvement plan (10276)		4.3.2.2	Execute detailed line schedule (10311)
	4.1.9	Develop quality standards and procedures (10368)		4.3.2.3	Rerun defective items (10313)
	4.1.9.1	Establish quality targets (10371)		4.3.2.4	Assess production performance (10314)
	4.1.9.2	Develop standard testing procedures (10372)		4.3.3	Schedule and perform maintenance (10305)
	4.1.9.3	Communicate quality specifications (10373)		4.3.3.1	Determine process for preventive (planned) maintenance (Preventive Maintenance Orders) (10315)
	4.2	Procure materials and services (10216)		4.3.3.2	Determine process for requested (unplanned) maintenance (Work Order Cycle) (10316)
	4.2.1	Develop sourcing strategies (10277)		4.3.3.3	Execute maintenance (10317)
Process	4.2.1.1	Develop procurement plan (10281)	Process	4.3.3.4	Calibrate test equipment (10318)
	4.2.1.2	Clarify purchasing requirements (10282)		4.3.3.5	Report maintenance issues (10319)
	4.2.1.3	Develop inventory strategy (10283)		4.3.4	Perform quality testing (10369)
	4.2.1.4	Match needs to supply capabilities (10284)		4.3.4.1	Perform testing using the standard testing procedure (10374)
	4.2.1.5	Analyze company's spend profile (10285)		4.3.4.2	Record test results (10375)
	4.2.1.6	Seek opportunities to improve efficiency and value (10286)		4.3.5	Maintain production records and manage lot traceability (10370)
	4.2.1.7	Collaborate with suppliers to identify sourcing opportunities (10287)		4.3.5.1	Determine lot numbering system (10376)
	4.2.2	Select suppliers and develop/maintain contracts			

Penentuan Prioritas (Pemilihan Proses)

1. Kepentingan Strategis

Proses mana yang memiliki dampak terbesar terhadap tujuan strategis organisasi?

2. Kesehatan Proses (disfungsi)

Proses mana yang mengalami masalah paling serius?

3. Kelayakan

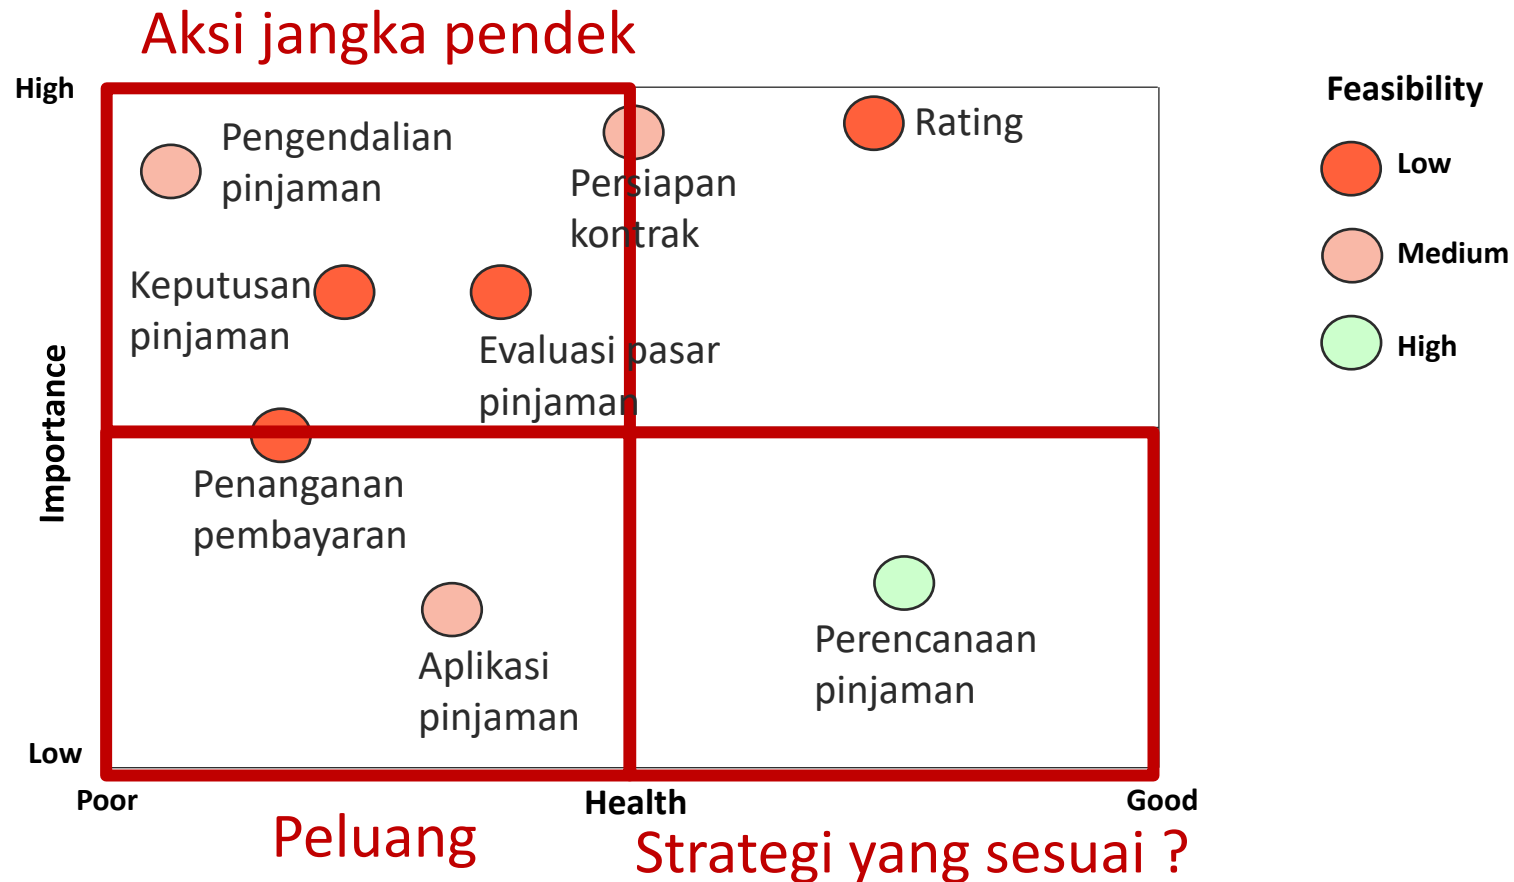

Proses mana yang paling rentan terhadap manajemen proses yang berhasil?

Portofolio prioritas proses

Contoh : Portofolio prioritas proses

Lembaga keuangan

Studi Kasus

1. Kerjakan Studi Kasus di halaman akhir Materi BAB 2.
2. Dikumpulkan dalam format pdf melalui Assignment LMS
